

# Why the manifest image is incompatible with the scientific image of the world

Adem Mulamustafić

## **The Clash of the Images**

In everyday life, we take there to be ordinary objects such as persons, tables, and stones bearing certain properties such as color and shape and standing in various causal relationships to each other. Basic convictions such as these form our everyday picture of the world: the manifest image. The scientific image, on the other hand, is a system of beliefs that is only based on scientific results. It contains many beliefs that are not contained in the manifest image. At first glance, this may not seem to be a problem. But Mulamustafić shows convincingly that this is a mistake: The world as it is in itself cannot be both the way the manifest image depicts it and the way the scientific image describes it to be.

## **Philosophie**

Adem Mulamustafić studied and completed his PhD in philosophy at the University of Potsdam. His areas of specialization are metaphysics, philosophy of science, and critical thinking.

Herausgegeben von Katja Crone / Johannes Haag / David Löwenstein
